

PET QUENCHERS

Traveling with your pets just got easier. Allen Ranch Products, LLC. recently began production of Pet Quenchers disposable bowls containing 14.5 ounces of purified water for your pets. Pet Quenchers was created by veterinarian and animal lover Densil Allen, DVM. These purified water bowls offer greater flexibility when on the go with your best friend. Also, you can take comfort in knowing that they are recyclable.

Just drop a container in your bag and you, your family, and your much-loved pet can be out the door!

Made In The USA 

“My husband and I travel frequently with our two dogs, and Pet Quenchers has made making trips so much easier. It’s not always convenient to stop and buy bottles of water for them, and with Pet Quenchers we never have to worry about how to keep the water bowl clean. Furthermore, with growing concerns about ‘going green,’ we take comfort knowing that we can recycle the bowls when we’re finished.” Peggy - Chicago

Pet Quenchers drinking water multi-stage filtration process: Before we start the filling process, our food-grade stainless steel tanks and filling machine are cleaned and sanitized. We use both in-house (Hach test kits) and independent laboratories (Inovatia Laboratories, LLC) to test our water quality to make sure it meets EPA guidelines for human drinking water. Our entire process is detailed for you below:

1. **Pre-Filtration**
2. **Carbon Filtration**
3. **Ultraviolet Light Process**
4. **Reverse Osmosis**
5. **Ozonation**
6. **Micron filtration**
7. **Filling**
8. **Heat Seal**
9. **Batch coding**
10. **Visual Inspection and Packaging**

All containers are visually inspected before packaging to ensure they meet our quality control guidelines. We will not let a container leave our facility that we would not feel comfortable giving to our own pets.
